Retake of GRS presentation on HPHT-treated sapphires from 2019 GILC meeting in Tucson, AZ

One of the topics discussed at this year's GILC meeting in Tucson, AZ (held on 4th February 2019) was **"Pressure /Temperature Corundum Treatment"**. GRS had been invited in order to present our findings on the topic. Mr. Edward Cleveland, research staff at GRS in Bangkok, represented GRS at the event and gave a presentation called **"HPHT (PHT) Treated Sapphires – An Update on Disclosure & Durability"**. Since the GILC meeting is by invitation only and all attendees have to sign a non-disclosure agreement, we have decided to record a retake of our own presentation so all trade members and the public can get more information on the subject. The presentation is held by GRS CEO Dr. A. Peretti.
